DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Farrell (US 5,143,433).

Regarding claim 1, Farrell ('433) discloses a night vision backlighting system having self-luminous sources 18 in primary colors being mixed to produce white light (column 6, lines 9-20), a light conducting plate 20 and column 5, lines 12-30 teaches that the primary colors being illuminated sequentially at different timing for each color thereby achieving time division light emission.

Regarding claim 2, Farrell teaches in column 7, lines 10-12 that the light source can be a light emitting diode.

Regarding claim 3, Farrell shows in figure 3 that the sources 18 are a fluorescent body 54 that generates light to the light scattering plate 24 (column 4, lines 59-63).

Regarding claim 4, Farrell shows in figure 3 that fluorescent body 54 has a phosphor layer 56.
